DOALL: buffers disjuntos conforme restrict; atribuição independente

Sequencial

```
void kernel_case(int n,
  const double *restrict A,
  const double *restrict B,
  double *restrict Y)
{
  for (int i = 0; i < n; i++)
    Y[i] = 2.0 * A[i] + B[i];
}
```

Candidato gerado

```
void kernel_case(int n,
  const double *restrict A,
  const double *restrict B,
  double *restrict Y)
{
  #pragma omp parallel for schedule(static)
  for (int i = 0; i < n; i++)
    Y[i] = 2.0 * A[i] + B[i];
}
```
